## Question 1

Correct

Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using counter method.

```
void reverse(int n)
{
    int rev = 0, remainder;
    while (n != 0)
    {
        remainder = n % 10;
        rev = rev * 10 + remainder;
        n /= 10;
    }
    print(rev);
}
```

**Note:** No need of counter increment for declarations and scanf() and count variable printf() statements.

**Input:**

A positive Integer n

**Output:**

Print the value of the counter variable

**Answer:**

```
1 #include <stdio.h>
2 int main(){
3     int rev = 0,n,remainder,c=0;
4     c++;c++;
5     scanf("%d",&n);
6     c++;
7     while (n!= 0) {
8         c++;
9         remainder = n % 10;c++;
10        rev = rev * 10 + remainder;c++;
11        n/= 10;c++;
12    }
13    printf("%d",c);
14    c++;
15    return 0;
16 }
17
```

	Input	Expected	Got	
✓	12	11	11	✓
✓	1234	19	19	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.
