Question 1

Correct

Mark 1.00 out of 1.00

Problem Statement:

Given a sorted array and a value x, the floor of x is the largest element in array smaller than or equal to x. Write divide and conquer algorithm to find floor of x.

Input Format

- First Line Contains Integer n – Size of array
- Next n lines Contains n numbers – Elements of an array
- Last Line Contains Integer x – Value for x

Output Format

- First Line Contains Integer – Floor value for x

Answer: (penalty regime: 0 %)

```
1 #include <stdio.h>
2 int findFloor(int arr[], int n, int x) {
3     int left = 0;
4     int right = n - 1;
5     int result = -1;
6
7     while (left <= right) {
8         int mid = left + (right - left) / 2;
9         if (arr[mid] == x) {
10             return arr[mid];
11         } else if (arr[mid] < x) {
12             result = arr[mid];
13             left = mid + 1;
14         } else {
15             right = mid - 1;
16         }
17     }
18     return result;
19 }
20 int main() {
21     int n;
22     scanf("%d", &n);
23     int arr[n];
24     for (int i = 0; i < n; i++) {
25         scanf("%d", &arr[i]);
26     }
27     int x;
28     scanf("%d", &x);
29     int floor = findFloor(arr, n, x);
30     printf("%d\n", floor);
31     return 0;
32 }
33
```
